1 Method-Scope Tests

1.1 assignPhoneNumber

Assigns a free phone number to a client of *Vos* if all conditions are met. If at least one does not hold, then this method does not change anything, throwing an `InvalidOperationException`.

1.1.1 Test Pattern – Category-Partition Test

1.1.2 Functions

- Primary function
 - Assign free phone number to a client without a number
- Secondary functions
 - Throw `InvalidOperationException` if conditions aren't met
 - * Invalid nif (nif $\notin [10^8, 10^9[$)
 - * A *Vos* client with the given nif doesn't exist
 - * Invalid phone number (number $\notin [10^8, 10^9[$)
 - * It isn't a *Vos* number
 - * Phone number already assigned
 - * Client can't be assigned any more numbers

1.1.3 Input/Output Parameters

- Input
 - `clientNif` – The nif of the client to assign a number to
 - `phoneNumber` – The phone number to be assigned
 - `clients` – The set of *Vos* clients managed by `ClientManager`
- Output
 - `client` – The updated client, if a number was assigned successfully

1.1.4 Categories & Choices

| Parameter | Category | Choices |
|-------------|---|---|
| clientNif | <i>Vos</i> client (w/ #numbers phone numbers) | #numbers $\in [1, 5[$ #numbers = 5 (MAX) |
| | Not a <i>Vos</i> client | clientNif $\in [10^8, 10^9[$ |
| | Invalid nif | clientNif $\notin [10^8, 10^9[$ |
| | | |
| phoneNumber | <i>Vos</i> phone number | Free (Unassigned) Not free (Assigned) |
| | Not a <i>Vos</i> number | phoneNumber $\in [10^8, 10^9[$ |
| | Invalid number | phoneNumber $\notin [10^8, 10^9[$ |
| | | |
| clients | <i>n</i> -elements | <i>n</i> = 0 (Empty) |
| | | <i>n</i> $\in [1, \text{MAX}]$ (Not empty) |

1.1.5 Constraints

- Empty `clients` list precludes the assignment of a `phoneNumber` to a client (which, since the list is empty, mustn't exist)
- Assigning an invalid `phoneNumber`, one that doesn't belong to *Vos* or one that is already assigned is the same for any kind of client

1.1.6 Test Cases

| TC | Choices | | | Expected Result | |
|----|------------------------|--------------------------|----------------------|-----------------|------------------------|
| | <code>clientNif</code> | <code>phoneNumber</code> | <code>clients</code> | Exception | <code>client</code> |
| 1 | $\#numbers \in [1, 5[$ | Free | $n \in [1, MAX]$ | NO | $\#numbers \in]1, 5]$ |
| 2 | $\#numbers \in [1, 5[$ | Not free | $n \in [1, MAX]$ | YES | — |
| 3 | $\#numbers \in [1, 5[$ | $\in [10^8, 10^9[$ | $n \in [1, MAX]$ | YES | — |
| 4 | $\#numbers \in [1, 5[$ | $\notin [10^8, 10^9[$ | $n \in [1, MAX]$ | YES | — |
| 5 | $\#numbers = 5$ | Free | $n \in [1, MAX]$ | YES | — |
| 6 | $\in [10^8, 10^9[$ | Free | $n \in [1, MAX]$ | YES | — |
| 7 | $\notin [10^8, 10^9[$ | Free | $n \in [1, MAX]$ | YES | — |

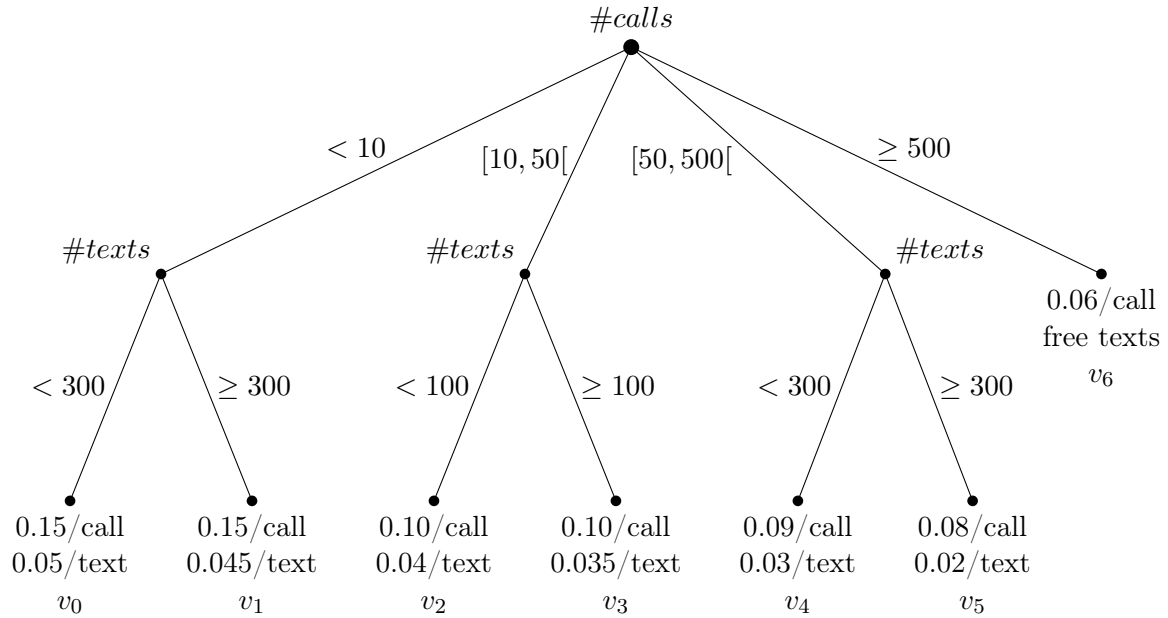

Table 1: Set of reduced test cases after constraints are applied

1.2 computeBill method

The responsibility of `computeBill` method is to determine the value to pay for a client taking into account all communications made by the client through all of his registered mobile phones

1.2.1 Test Pattern – Combinational Function Test

1.2.2 Decision Tree

1.2.3 Domain Matrices

| v_0 | | | Test Cases | | | |
|-----------------|-----------|------|------------|-------|-------|-------|
| Variable | Condition | Type | — | 1 | — | 2 |
| #calls | < 10 | ON | 10 | | | |
| | | OFF | | 9 | | |
| | Typical | IN | | | 8 | 7 |
| #texts | < 300 | ON | | | 300 | |
| | | OFF | | | | 299 |
| | Typical | IN | 147 | 204 | | |
| Expected Result | | | v_3 | 11.55 | v_1 | 16.00 |

Table 2: v_0 domain matrix

| v_1 | | | Test Cases | | | |
|-----------------|------------|------|------------|-------|-------|-------|
| Variable | Condition | Type | — | 3 | 4 | — |
| #calls | < 10 | ON | 10 | | | |
| | | OFF | | 9 | | |
| | Typical | IN | | | 6 | 5 |
| #texts | ≥ 300 | ON | | | 300 | |
| | | OFF | | | | 299 |
| | Typical | IN | 320 | 400 | | |
| Expected Result | | | v_3 | 19.35 | 14.40 | v_0 |

Table 3: v_1 domain matrix

| v_2 | | | Test Cases | | | | | |
|-----------------|-----------|------|------------|-------|-------|------|-------|------|
| Variable | Condition | Type | 5 | — | — | 6 | — | 7 |
| #calls | ≥ 10 | ON | 10 | | | | | |
| | | OFF | | 9 | | | | |

| v_5 | | | Test Cases | | | | | |
|-----------------|------------|------|------------|-------|-------|-------|-------|-------|
| Variable | Condition | Type | 14 | — | — | 15 | 16 | — |
| #calls | ≥ 50 | ON | 50 | | | | | |
| | | OFF | | 49 | | | | |
| | < 500 | ON | | | 500 | | | |
| | | OFF | | | | 499 | | |
| | Typical | IN | | | | | 200 | 60 |
| #texts | ≥ 300 | ON | | | | | 300 | |
| | | OFF | | | | | | 299 |
| | Typical | IN | 314 | 500 | 616 | 404 | | |
| Expected Result | | | 10.28 | v_3 | v_6 | 48.00 | 22.00 | v_4 |

Table 7: v_5 domain matrix

| v_6 | | | Test Cases | |
|-----------------|------------|------|------------|-----------|
| Variable | Condition | Type | 17 | — |
| $\#calls$ | ≥ 500 | ON | 500 | |
| | | OFF | | 499 |
| Expected Result | | | 30.00 | v_4/v_5 |

Table 8: v_6 domain matrix

2 Class-Scope Tests

2.1 Client class

Each client of *Vos* has a name (with a minimal length of 5) and by its social security number (designated as *nif*). This number is a unique identifier in *Vos*. A client can have several phone numbers managed by *Vos* (between 1 and 5). Each client can associate a mobile phone to each of his assigned phone numbers.

Each client can register in the system a given amount of phone number of *friends*. The maximum number of phone number a client can register is equal to three times the number of phone numbers plus five.

2.1.1 Test Pattern – Non-Modal Class Test

2.1.2 Class Invariant

Domain restrictions

| Client variables | |
|----------------------|----------------------------------|
| Variable | Type |
| <code>name</code> | <code>String</code> |
| <code>nif</code> | <code>int</code> |
| <code>numbers</code> | <code>List<Integer></code> |
| <code>friends</code> | <code>List<Integer></code> |

- `name.length() ≥ 5`
- `nif ∈ [108, 109[`
- `numbers.size() ∈ [1, 5]`
- `friends.size() ≤ 3 × numbers.size() + 5`

Table 9: Client class' variables and their respective types

The logical conjunction of all of these restrictions makes up the Class Invariant

2.1.3 On and Off points

| Boundary | ON | OFF |
|--|-----------------|---------------------|
| <code>name.length() ≥ 5</code> | 5 | 4 |
| <code>nif ≥ 10⁸</code> | 10 ⁸ | 10 ⁸ – 1 |
| <code>nif < 10⁹</code> | 10 ⁹ | 10 ⁹ – 1 |
| <code>numbers.size() ≥ 1</code> | 1 | 0 |
| <code>numbers.size() < 5</code> | 5 | 4 |
| <code>friends.size() ≤ 3n¹ + 5</code> | 3n + 5 | 3n + 6 |

Table 10: On and Off points for the Client class' invariant boundaries

¹`numbers.size()`

2.1.4 Domain Matrix

| Boundary | | | Test Cases | | | | | | | | | | | |
|-----------------|-------------------|------|---------------------|---------------------|-----------------|---------------------|-----------------|---------------------|---------------------|---------------------|---------------------|---------------------|---------------------|---------------------|
| Variable | Condition | Type | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 |
| name.length() | ≥ 5 | ON | 5 | | | | | | | | | | | |
| | | OFF | | 4 | | | | | | | | | | |
| nif | Typical | IN | | | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 |
| | ≥ 10 ⁸ | ON | | | 10 ⁸ | | | | | | | | | |
| | | OFF | | | | 10 ⁸ − 1 | | | | | | | | |
| | < 10 ⁹ | ON | | | | | 10 ⁹ | | | | | | | |
| | Typical | IN | 10 ⁸ + 1 | 10 ⁸ + 2 | | | | 10 ⁹ − 1 | | | | | | |
| numbers.size() | ≥ 1 | ON | | | | | | | 10 ⁸ + 3 | 10 ⁸ + 4 | 10 ⁸ + 5 | 10 ⁸ + 6 | 10 ⁸ + 7 | 10 ⁸ + 8 |
| | | OFF | | | | | | | 1 | 0 | | | | |
| | < 5 | ON | | | | | | | | | 5 | | | |
| | | OFF | | | | | | | | | | 4 | | |
| | Typical | IN | 2 | 3 | 4 | 3 | 2 | 3 | | | | | 4 | 3 |
| | | ON | | | | | | | | | | | 17 | |
| friends.size() | ≤ 3n + 5 | OFF | | | | | | | | | | | | 15 |
| | Typical | IN | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | Y | N |
| Expected Result | | | Y | N | Y | N | N | Y | Y | N | N | Y | Y | N |

Table 11: Client class test cases
